surface asset management

OVERVIEW

SAM is a digital inspection app to centrally manage coating and inspection management services online.

Using the latest technology, the software streamlines all aspects of coating and NDT inspection management making Surface Asset Management simple.

From conditional surveys, inspection campaign and scope management to inspection reviews, analysis, reporting and critical repair management, SAM enables complete management and digitisation of surface corrosion and inspection. The software removes duplication of tasks and creates a single point of access to monitor corrosion and manage the execution of coating systems, passive fire protection and insulation instalment.

Suitable for a variety of industrial applications, including structural steelwork and process pipework, SAM is the leading online solution providing full cradle to grave traceability.

HOW DOES IT WORK?

Using a tablet and Bluetooth technology, coating inspectors record inspection data in real time, including MPI, UT and Visual readings as well as images. With an internet connection, the collected data is uploaded and saved to a secure server. Respective inspection reports are created instantaneously, removing the need for manual data input. Reports are available anytime to download or share as required. Simple.

AN INTEGRATED APPROACH

The online platform can be fully customised to suit your asset specific processes and procedures and allows you to centrally manage:

- Historical asset data
- Operatives' qualifications and competency
- Survey data
- Coating products
- Dry Film Thickness
- Surface profiles
- Compliance verification
